

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

counted fourteen of them, but probably missed some, because they were very wary, not permitting a close approach.

LYNDS JONES.

A January Chewink (*Pipilo erythrophthalmus*). To-day, January 26, 1902, I observed a Chewink in company with a flock of Slate-colored Juncos and Tree Sparrows. I have noticed the abundance, or rather the great number of Blue Jays this winter; also the six or eight Red-headed Woodpeckers which have remained in one section of a woods. Last fall I was unable to identify the dusky headed ones until Dr. C. C. Abbott straightened me out by informing me that they were the immature Red-heads. I recorded fifteen species during the walk, the best I have done for a long while.

THOS. D. KEIM.

Wissahickon, Philadelphia.

SOME FRANKLINVILLE FRINGILLINES.

[With apologies to Bro. R. R., who is, after all, a very good fellow.]

FRANKLINVILLE, O., Jan. 16, 1902.

DEAR MR. EDITOR: Thinking your readers might be interested in a contribution from an humble fringillologist, I append a sample horizon for publication in the twentieth (current) volume of the Ancient Murrelet.

Realizing many years ago the utter futility of trying to compass the whole field of ornithology, I settled upon the Fringillidæ for special work. This was not so hopeless an undertaking in the crude days of the Trinomialists, some twenty years since; but now that science has made such colossal strides, numbering, as it does, the sub-subter-sub, and infra-subter-sub-species of sparrows in America alone by the thousands, I find myself obliged to confine my attention to the reporting of a winter's day, and a very cold one at that.
